Experience

Arbiter - Local AI App

June 2025 - Present

Founder & Product Engineer - Swift, SwiftUI, Firebase, MLX, llama.cpp

- Founded and built Arbiter, a privacy-first AI app that runs quantized LLMs locally on users' devices, reaching **1,000+ downloads** within three months
- Developed a shared **SwiftUI codebase for macOS and iOS** supporting multiple AI runtimes, vision models, persistent memory, **RAG-based document analysis**, and real-time web search
- Improved reliability by recommending device-appropriate models and **dynamically managing context** through summarization and trimming to reduce memory-related crashes
- Designed Arbiter's interfaces in **Figma**, including app views, onboarding, branding, App Store assets, and promotional materials
- Own product strategy, user research, marketing, and user acquisition, using customer feedback and performance data to guide product development and growth

AT&T

July 2022 - May 2026

Software Engineer - Swift, SwiftUI, Angular, Node.js, Java

Dallas, TX

- Owned and shipped production features for an internal iOS application used by **thousands of field technicians**, driving an estimated **\$5M in annual cost savings**
- Built a critical workflow that prevents technicians from closing tickets unless customer devices are fully updated, **reducing follow-up visits by ~30%** and saving thousands of dollars annually
- Revamped the Swift application to use the `@Observable` macro to reduce UI reloads and migrated much of the heavy computation to the server, lowering iOS workload and **cutting crashes by ~50%**
- Played a key role in modernizing a legacy backend platform and migrating services to Azure, contributing to **\$1M+ in annual infrastructure savings**
- Led Java development and migration of 4 production APIs **handling up to 200 TPS**, improving reliability and scalability

UBS

June 2021 - August 2021

Quant Trading Summer Analyst - Python, React.js, KDB+

New York City, NY

- Developed React.js webpage that allows traders to generate client TCA reports by entering account name and dates
- Produced a dashboard using Dash to provide visualizations of intraday and historical trading data
- Compiled a report using multiple models to predict per-client PnL based on historical data and trading strategies

Education

Washington University in St. Louis

St. Louis, MO

School of Engineering & Applied Science

May 2022

Bachelor of Science in Computer Science with a Minor in Mathematics

Projects

AI Newsletter App, Python, Flask, Next.js, HTML, CSS, OpenAI API

- Delivered a fully automated daily email newsletter that provides a summary of the latest news around the world

Ethereum Money Pool Website, JavaScript, Next.js, Solidity, HTML, CSS

- Built a decentralized Ethereum money pool platform using smart contracts to manage pooled funds and payouts

Skills

Swift, SwiftUI, Java, Next.js, Node.js, JavaScript/TypeScript, Python, CSS, HTML
